# What is Drupal Theme

In drupal, a theme is the final step in the process of building a web page for display

# Where Find Theme

- <http://drupal.org/project/themes>
- <http://themegarden.org/>

# How to Install Drupal Theme

Once yuh have selected yuh theme download and unpack your theme

- Drush dl mon\_theme
- Enable the new theme (administrer--> themes)
- Setup global settings

# Anatomy of a Theme

- .info
- Page template
- Css and javascripts files
- Regions
- Images/
- ScreenShot

# Features

- Logo
- Site Name
- Site Slogan
- Mission Statement
- User Pictures in Posts
- User Pictures in Comments

# Features

- Search Box
- Shortcut Icon
- Primary Links
- Secondary Links

# Starter Themes

- <http://drupal.org/project/zen>
- <http://drupal.org/project/genesis>
- <http://drupal.org/project/atck>
- <http://drupal.org/project/basic>
- <http://drupal.org/project/beginning>
- <http://drupal.org/project/framework>
- <http://drupal.org/project/blueprint>
- <http://drupal.org/project/danland>

# Sub Theme

- A subtheme is a child theme that borrows certain attributes from a parent theme. This allows you to use an established theme and a derivative of that theme both on the same site without needing to alter or duplicate the original theme.

# Create my own theme

- Create yuh theme directory with the same same name of yuh theme
- Create a .info where yuh define name,regions,css features
- Create and edit Page template

# Conclusion

- Lets do Some Theming
